PROFESSIONAL SUMMARY

Senior SAP SD/QM Consultant with 9+ years of experience supporting SAP ECC and SAP S/4HANA solutions within a large international manufacturing environment.

Delivered functional support, incident resolution, business process optimization, SAP customization, and end-user consulting across mission-critical sales and logistics processes. Strong expertise in Order-to-Cash (O2C), Pricing, Deliveries, Billing, Freight Cost Processing, Transportation Processes, and integration with MM, FI, and QM modules.

Actively participated in SAP ECC to SAP S/4HANA migration initiatives, leading business data validation, reconciliation, migration testing, discrepancy analysis, and hypercare support activities. Designed and developed a web-based reconciliation platform used to automate migration quality controls and improve data accuracy.

Combines SAP consulting expertise with 20+ years of experience in enterprise software development, business analysis, project management, process automation, and data analytics.

Available for remote SAP SD / SAP S/4HANA Support engagements (part-time, up to 50% workload).

CORE COMPETENCIES

- SAP SD
- SAP QM
- SAP ECC
- SAP S/4HANA
- SAP Support
- SAP Application Support
- SAP Customizing

- Incident Management
- Service Request Management
- Change Request Management
- Root Cause Analysis
- Functional Consulting
- Order-to-Cash (O2C)
- Sales Orders
- Pricing & Conditions
- Deliveries
- Billing
- Customer Master Data
- Transportation Processes
- Freight Cost Processing
- SAP Testing
- UAT
- Business Process Analysis
- Data Validation
- Data Reconciliation
- Data Quality Management
- SAP Migration
- S/4HANA Migration
- SD/MM Integration
- SD/FI Integration
- SD/QM Integration

PROFESSIONAL EXPERIENCE

Senior SAP SD/QM Consultant

ArcelorMittal Kryvyi Rih, Ukraine

05/2024 – Present

Senior SAP SD Consultant — 03/2017 – 05/2024

Key Responsibilities

- Deliver Level 2 and Level 3 support for SAP SD and SAP QM business processes.
- Resolve incidents, service requests, and change requests in production environments.
- Analyze business requirements and translate them into functional specifications.
- Perform SAP SD customization and configuration activities.
- Support and optimize Order-to-Cash (O2C) business processes.
- Coordinate testing, deployment, and post-implementation support activities.
- Conduct root cause analysis for recurring business and system issues.
- Collaborate with business users, technical teams, and cross-functional stakeholders.

SAP Functional Areas

- Order-to-Cash (O2C)
- Sales Orders
- Pricing & Conditions
- Deliveries
- Billing
- Customer Master Data
- Transportation Processes
- Freight Cost Processing
- Output Determination
- Partner Determination
- Text Determination
- SD/MM Integration
- SD/FI Integration
- SD/QM Integration

SAP ECC to SAP S/4HANA Migration Support

- Supported SAP ECC to SAP S/4HANA migration initiatives through business data validation and reconciliation activities.
- Performed analysis of SAP master and transactional data using SE16N extracts and Excel-based comparison methods.

- Validated datasets ranging from 30,000 to 840,000 records to ensure migration accuracy and business readiness.
- Investigated data discrepancies and coordinated corrective actions with functional teams and business stakeholders.
- Supported migration testing cycles, cutover preparation, and post-go-live hypercare activities.
- Prepared reconciliation reports and provided data quality evidence for business acceptance and sign-off.

Business Data Validation & Reconciliation

Data Domains

- Customer Master Data
- Material Master Data
- Sales Documents
- Deliveries
- Billing Documents
- Logistics Data
- Transportation Data
- Historical Business Records

Achievements

- Identified and documented critical business data discrepancies.
- Improved quality and consistency of migration datasets.
- Produced reconciliation reports used for migration approval and project decision-making.
- Validated and reconciled datasets ranging from 30,000 to 840,000 records across multiple business domains
- Supported corrective actions that increased migration readiness.

Railway Carrier Document Adaptation System

Role: Solution Designer & Developer

Designed and developed a VBA-based business application used to automate processing and adaptation of railway carrier transportation acts supporting transportation cost verification activities.

Technology Stack:

- VBA
- Microsoft Excel

Key Contributions

- Designed and developed an internal application for automated processing of railway carrier transportation documents.
- Implemented document import, validation, transformation, and data normalization procedures.
- Developed business rules for adaptation of carrier-specific document formats into a standardized structure.
- Automated preparation of transportation documentation for subsequent business verification and SAP-related reconciliation activities.
- Created user-oriented processing tools and operational reporting functionality.

Business Impact

- Reduced manual effort associated with transportation document processing.
- Improved consistency and quality of logistics-related business data.
- Accelerated preparation of freight documentation for verification activities.
- Increased efficiency of transportation cost control processes.

Key Achievement

- Solution has been actively used in production for more than 10 years.

Migrato - Migration Data Reconciliation Platform

Role: Solution Designer & Developer

Designed and developed **Migrato**, a web-based data reconciliation platform utilized during SAP migration and business data validation activities.

Project URL:

https://migrato-five.vercel.app/

Technology Stack:

- React
- TypeScript
- Node.js

- PostgreSQL
- SQL

Key Contributions

- Designed reconciliation workflows and application architecture.
- Automated comparison of source and target datasets.
- Implemented discrepancy detection and exception reporting.
- Developed analytical reporting mechanisms for migration validation.
- Streamlined migration verification activities.

Business Impact

- Reduced manual reconciliation effort.
- Improved visibility into migration-related data issues.
- Increased accuracy of business data validation.
- Accelerated migration quality assurance processes.

Key Achievements

- Supported SAP SD/QM operations within one of the largest steel manufacturing enterprises in Europe.
- Participated in SAP S/4HANA migration and transformation programs.
- Validated and reconciled large volumes of business-critical information.
- Designed and developed a VBA-based railway transportation document adaptation system successfully used in production for more than 10 years
- Designed and implemented the Migrato reconciliation platform.
- Resolved complex production incidents impacting business operations.
- Supported critical integrations involving SAP SD, MM, FI, and QM.
- Delivered end-user training and knowledge transfer activities.

Project Manager / IT Consultant / Data Analyst / Developer

ArcelorMittal Kryvyi Rih, Ukraine

2013 – 2017

Key Responsibilities

- Managed IT initiatives involving teams of 5–15 specialists.
- Conducted business requirements gathering and process analysis.

- Coordinated implementation of enterprise software solutions.
- Performed management reporting and analytical activities.
- Evaluated vendors and technology solutions.
- Developed and enhanced internal business applications.

Key Achievements

- Led multidisciplinary project teams.
- Improved business process efficiency through automation initiatives.
- Delivered analytical reporting supporting management decision-making.
- Successfully coordinated software implementation projects.

Head of Division / Lead Software Engineer

ArcelorMittal Kryvyi Rih, Ukraine

2001 – 2013

Key Responsibilities

- Managed enterprise software development and support teams.
- Designed and implemented business-critical information systems.
- Coordinated development, maintenance, and operational support activities.
- Supported production, logistics, and reporting processes.

Major Systems Developed

- Inventory Management System
- Workwear Accounting System
- Railway Transport Management System
- Corporate Reporting Solutions

Key Achievements

- Led development of multiple enterprise applications adopted across business units.
- Delivered software solutions supporting production and logistics operations.
- Developed systems that remained in operational use for many years.
- Established and maintained critical reporting and information systems.

Technologies

- Oracle Forms

- Oracle Reports
- Oracle Database
- SQL
- PL/SQL

ADDITIONAL TECHNICAL PROJECTS

GardenPay – Community Finance & Property Management Platform

Role: Solution Architect | Business Analyst | Full Stack Developer

Technology Stack:

- React
- TypeScript
- Node.js
- Express
- PostgreSQL
- Supabase
- TanStack Query
- React Hook Form
- Zod
- Vercel

Enterprise-style web application designed to automate financial and operational management processes for a community association.

Key Contributions

- Defined business requirements and application architecture.
- Designed relational database structures and financial workflows.
- Implemented contribution, tariff, payment, and debt-management processes.
- Developed dashboards and analytical reports.
- Implemented role-based access control and security model.

Business Features

- Property Management
- Member Registry
- Contribution Management

- Tariff Administration
- Utility Meter Accounting
- Accrual Processing
- Payment Processing
- Debt Monitoring
- Financial Reporting
- Dashboard Analytics
- Audit Trail

Demonstrated Competencies

- Solution Architecture
- Business Analysis
- Financial Process Modeling
- Data Modeling
- Reporting & Analytics
- Full Stack Development

Memories – Personal Knowledge Management Platform

Technology Stack: React, Node.js, Express, PostgreSQL, JWT, Cloudinary

- Designed and developed a full-stack knowledge management application.
- Implemented authentication, authorization, and media management.
- Designed REST APIs and database architecture.
- Deployed and maintained production environments.

Conv Schedule – Scheduling & Planning Application

Technology Stack: React, Node.js, PostgreSQL

- Developed scheduling and planning workflows.
- Implemented event and resource allocation functionality.
- Designed supporting database structures.

NAIAN – News Analytics Platform

Technology Stack: React, Node.js, PostgreSQL

- Designed architecture for news collection and classification.
- Developed analytical structures for regions, topics, and events.
- Implemented concepts for aggregation, summarization, and reporting.

TECHNICAL SKILLS

SAP

- SAP ECC
- SAP S/4HANA
- SAP SD
- SAP QM
- SAP Application Support
- SAP Customizing
- Incident Management
- Change Management
- UAT
- Data Migration Support
- Master Data Management

Development

- React
- TypeScript
- JavaScript
- Node.js
- Express
- PostgreSQL
- Oracle Database
- SQL
- PL/SQL
- Python
- Flask

- VBA
- Excel

Data & Analytics

- Data Validation
- Data Reconciliation
- Data Quality Management
- Business Intelligence
- Reporting
- Migration Analysis
- DuckDB

Cloud & Deployment

- Supabase
- Vercel
- Render
- Cloudinary

EDUCATION

Bachelor's Degree in Automation of Computer-Integrated Systems and Robotics

Kryvyi Rih National University

Expected Graduation: 2026

Master's Degree in Economics

Kryvyi Rih National University

2000–2001

S**pecialist Degree in Economics and Mathematics**

Kryvyi Rih National University

1999–2000

Bachelor's Degree in Economic Cybernetics

Kryvyi Rih National University

1995–1999

LANGUAGES

- English – B2
- Ukrainian – C1
- Russian – C1
- French – A1

ADDITIONAL INFORMATION

- Available for Remote Part-Time Cooperation (up to 50%)
- Strong Analytical and Troubleshooting Skills
- Experience in International Manufacturing Environment
- SAP ECC and SAP S/4HANA Migration Experience
- Extensive Data Validation and Reconciliation Expertise
- Combination of SAP Consulting, Business Analysis, Project Management, and Software Development Experience
