PROFESSIONAL SUMMARY

Senior Business Systems Specialist with 25+ years of experience supporting, implementing, improving, and developing enterprise business applications within a large international manufacturing environment. Expertise in business systems analysis, requirements gathering, business process improvement, enterprise application support, SAP ERP, Oracle-based solutions, solution architecture, data analysis, reporting, and project coordination.

Proven experience translating business requirements into practical system solutions, supporting digital transformation initiatives, optimizing operational processes, managing business-critical applications, and collaborating with cross-functional stakeholders. Strong background in SAP SD, SAP QM, Oracle technologies, SQL, analytics, data validation, reconciliation, testing, user support, and continuous improvement.

Experienced in the full software development lifecycle (SDLC), enterprise application implementation, systems integration, stakeholder management, requirements documentation, and solution delivery in production, logistics, transportation, inventory, and business operations domains.

CORE COMPETENCIES

- Business Systems Analysis
- Business Process Analysis
- Business Process Improvement
- Requirements Gathering
- Functional Specifications
- Solution Design
- Enterprise Applications
- ERP Systems
- SAP ERP

- SAP S/4HANA
- SAP SD
- SAP QM
- Oracle Applications
- Business Application Support
- Incident Management
- Problem Management
- Change Management
- User Acceptance Testing (UAT)
- System Testing
- Stakeholder Management
- Cross-Functional Collaboration
- Data Analysis
- Data Validation
- Data Reconciliation
- Data Quality Management
- Reporting & Analytics
- Dashboard Development
- Process Automation
- Systems Integration
- Project Coordination
- Project Management
- SQL
- Oracle Database
- Business Documentation
- User Support & Training
- Continuous Improvement

PROFESSIONAL EXPERIENCE

Business Systems Specialist | SAP & Enterprise Applications Consultant

ArcelorMittal Kryviy Rih, Ukraine

May 2017 – Present

Responsibilities

- Gather business requirements from stakeholders and translate them into business system solutions.
- Support business-critical ERP applications and enterprise systems.
- Prepare functional specifications and business process documentation.
- Analyze incidents, perform root cause analysis, and coordinate issue resolution.
- Support SAP SD and SAP QM business processes and integrations.
- Coordinate testing, UAT activities, deployment, and post-go-live support.
- Deliver analytical reports and operational insights for business users.
- Conduct data validation, reconciliation, and master data quality activities.
- Provide user support, training, and consultation.
- Participate in SAP S/4HANA migration and business transformation initiatives.
- Support continuous improvement and process optimization activities.

Key Achievements

- Participated in SAP ECC and SAP S/4HANA transformation initiatives.
- Supported large-scale data migration readiness and business validation activities.
- Improved business data quality and reporting accuracy.
- Resolved complex business-process and application-support issues.
- Supported enterprise-wide operational processes and business applications.

Project Manager | IT Consultant | Data Analyst | Developer

ArcelorMittal Kryviy Rih, Ukraine

September 2013 – May 2017

Responsibilities

- Managed IT and business improvement projects involving teams of 5–15 specialists.
- Gathered and analyzed business requirements.
- Evaluated software vendors and business solutions.
- Coordinated implementation of enterprise software solutions.
- Prepared project plans, specifications, and implementation documentation.

- Developed analytical reports and business performance analytics.
- Improved and supported internal business applications.
- Facilitated communication between stakeholders and technical teams.

Key Achievements

- Delivered multiple business application initiatives.
- Improved reporting and analytical capabilities.
- Increased business process efficiency through automation initiatives.
- Supported management decision-making through business analytics solutions. [nk1124 | Word]

Head of Division | Lead Software Engineer | Business Systems Developer

ArcelorMittal Kryviy Rih, Ukraine

February 2001 – September 2013

Led development, implementation, enhancement, and support of enterprise business systems serving production, logistics, transportation, inventory, and operational departments.

Responsibilities

- Full Software Development Lifecycle (SDLC).
- Business requirements gathering and analysis.
- Process mapping and solution architecture.
- Database design and data modeling.
- Application development, testing, implementation, and support.
- User acceptance testing support.
- User training and change management.
- System optimization and continuous improvement.
- Management of development and business application support teams.

MAJOR ENTERPRISE SYSTEMS DELIVERED

Workwear Planning, Distribution and Control System

Role: Solution Designer & Lead Developer

- Designed and implemented an enterprise solution for planning, issuing, and controlling employee workwear.

- Automated planning, inventory tracking, replacement scheduling, and reporting processes.
- Supported annual workwear planning for more than **25,000 employees**.
- Improved compliance, visibility, and operational control of PPE and workwear allocation.
- Reduced manual administration and improved reporting capabilities.

Technologies: Oracle Database, Oracle Forms, Oracle Reports, SQL, PL/SQL

Railway Rolling Stock Statistics and Analytics System

Role: Solution Designer & Lead Developer

- Designed and implemented an analytics platform supporting railway transportation operations.
- Automated collection, aggregation, and analysis of transportation data.
- Enabled operational monitoring and reporting for more than **2,000 railway rolling stock units**.
- Developed KPI reports, dashboards, and management analytics.
- Supported transportation planning and operational decision-making.

Technologies: Oracle Database, Oracle Reports, SQL, PL/SQL

Fuel and Lubricants Accounting System

Role: Solution Designer & Lead Developer

- Developed an enterprise fuel accounting and consumption control system.
- Automated fuel issuance, consumption tracking, stock balances, and variance analysis.
- Improved control over refueling operations and fuel utilization.
- Integrated the solution with the industrial automation system **Delta**.
- Enhanced operational transparency and cost management.

Technologies: Oracle Database, Oracle Forms, Oracle Reports, SQL, PL/SQL

Railway Rolling Stock Tracking and Number Accounting System

Role: Solution Designer & Lead Developer

- Designed and implemented an enterprise-wide railway asset tracking solution.

- Integrated internal railway infrastructure with external access and industrial railway networks.
- Supported operational accounting and movement tracking across more than **29 railway stations**.
- Automated rolling stock registration, movement monitoring, and status control.
- Improved visibility and operational management of railway logistics processes.

Technologies: Oracle Database, Oracle Forms, Oracle Reports, SQL, PL/SQL

Shop Floor Materials Inventory Management System

Role: Solution Designer & Lead Developer

- Developed a system for accounting and controlling materials and consumables within production workshops.
- Automated warehouse transactions, stock movement tracking, inventory balances, and reporting.
- Improved inventory accuracy and operational transparency.
- Supported production planning and material utilization control.

Technologies: Oracle Database, Oracle Forms, Oracle Reports, SQL, PL/SQL

SELECTED PROJECTS

Migrato - Data Validation & Reconciliation Platform

Role: Solution Designer & Developer

Web application supporting data validation, data reconciliation, discrepancy detection, migration quality assurance, and business reporting.

Competencies:

- Business Analysis
- Data Validation
- Data Reconciliation
- Process Automation
- Reporting & Analytics
- Solution Architecture

Railway Carrier Document Adaptation System (TARTAR)

Role: Solution Designer & Developer

Automation platform for transforming carrier-specific railway documents into standardized formats for validation, reconciliation, reporting, and further business processing.

Business Value

- Reduced manual processing effort.
- Improved data consistency.
- Accelerated verification procedures.
- Increased operational efficiency.

GardenPay

Role: Solution Architect | Business Analyst | Full Stack Developer

Business management platform supporting member administration, financial operations, fee management, debt control, reporting, and business analytics.

Competencies

- Requirements Gathering
- Business Analysis
- Data Modeling
- Solution Design
- Reporting & Dashboards
- Full Solution Lifecycle Management

TECHNICAL SKILLS

ERP & Enterprise Applications

- SAP ECC
- SAP S/4HANA
- SAP SD
- SAP QM
- SAP Solution Manager
- Enterprise Application Support
- Business Systems Administration

Data & Analytics

- SQL
- Data Analysis
- Data Validation
- Data Reconciliation
- Data Quality Management
- Reporting & Analytics
- KPI Reporting
- Dashboard Development
- Power BI
- Tableau
- Excel
- Google Sheets

Databases

- Oracle Database
- PostgreSQL
- SQL
- PL/SQL

Development

- Oracle Forms
- Oracle Reports
- VBA
- Python
- JavaScript
- TypeScript
- React
- Node.js
- HTML
- CSS

Project & Process Management

- Business Analysis

- Requirements Gathering
- Functional Specifications
- UAT
- SDLC
- Change Management
- Process Improvement
- Stakeholder Management
- Project Coordination

CAREER HIGHLIGHTS

- 25+ years of experience in enterprise information systems and business applications.
- Supported business-critical systems for ArcelorMittal Kryviy Rih, one of Europe's largest steel manufacturing enterprises.
- Participated in SAP ECC to SAP S/4HANA transformation initiatives.
- Managed project teams of up to 15 specialists
- Delivered enterprise applications supporting logistics, transportation, inventory, fuel management, production operations, and reporting.
- Developed solutions supporting more than 25,000 employees, 2,000 rolling stock units, and 29 railway stations.

EDUCATION

Bachelor's Degree in Automation of Computer-Integrated Systems and Robotics

Master's Degree in Economics

Bachelor's Degree in Economic Cybernetics
